Hybrid Flooring (Stone Polymer Composite)

MAINTENANCE

Golden Elite WPC and Stone Polymer Hybrid floors are easy to clean as they don't have the dirt-attracting cracks and crevices of the traditional flooring they replicate.
To clean your new floor, simply sweep away or vacuum any loose debris. Use a soft, nonabrasive broom or vacuum head.
Do not use a steam mop, wipe using only a slightly damp mop using a Bona floor cleaner.
Do not use any acidic cleaning products such as spirits containing methanol. Never use abrasive cleaners, nylon scouring pads or anything that will damage the surface of the floors.
Please see BONA for recommended cleaning products.

Things to keep in mind:
• Avoid dragging heavy objects across your new floor.
• Apply felt protectors under chairs and heavy furniture.
• Place rugs in areas of excessive traffic and wear.
• Keep pet nails trimmed to minimise scratching.
• Use alternatives to rubber entrance mats, as rubber can leach into the floor.
• Mop up spillages to prevent stains. Use only a slightly damp mop and avoid excessive amounts of
water. Do not use a steam mop.
• Avoid using oil soaps, liquids, waxes and other household products that may tarnish the coating.
• Use window coverings to prevent prolonged exposure to direct sunlight.
